

Rubber profiles don't just come in standard shapes.

The fact is that the majority of profiles we manufacture are specially developed for a wide variety of applications. They are incorporated in machines, equipment and vehicles, where they fulfil the most diverse of functions. They can seal, absorb shock, insulate, reduce vibration or serve as a decorative covering over a joint.

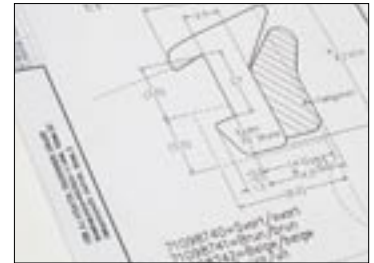

Special solutions.

The installation or fixing of profiles often turns out to be the biggest problem. We have therefore developed manufacturing methods for producing dual component strips. The fixing section is made of a harder material than the sealing section.

Combinations of solid and cellular rubber, and profiles in a range of colours are also possible.

Another of our specialties is self-adhesive profiles. These are strips of either cellular rubber or solid rubber with a backing of reinforced double-sided adhesive tape.

Our solid rubber profiles can also incorporate a fibreglass cord to prevent the strip from stretching during fitting. This is particularly useful for mechanical fitting.

The ideal solutions.

Experience has shown us that close collaboration between our engineers and the customer's engineers at an early stage of development work gives the best results.

This often means better performance at lower cost. Don't hesitate to contact us even if your products are only at the conceptual stage.

We have plenty of good ideas.

With experience of solving hundreds of problems you can gain the benefit of our know-how in designing the right specialist profile. Profile dies are manufactured to the greatest possible accuracy using computer-controlled wiring machines.

We can also manufacture profiles in precisely the grade of rubber that is needed to give a profile the desired properties.

General - O-strip with fixing leg

EPDM cellular rubber, self-adhesive

Trelleborg Crown strip

Trelleborg offers a whole range of joint tapes that are approved for use with double-glazing, for example. They may be used with or without a top seal in accordance with the regulations set out in MTK installation instructions. Trelleborg Crown strip is available in a range of sizes to suit various needs and applications.

- manufactured from EPDM cellular rubber with excellent resistance to cold, heat and ageing.
- ridged profile gives multi-point seal
- closed cells and continuous skin
- soft and resilient – easy to fit
- no joints
- fibreglass reinforced dual component tape

Product no.	Width x Height mm	Qty. m/roll	Colour	Pack. qty. m

General - Cellular rubber strip

8:23

- Exceptional resistance to heat and cold.
- Almost zero water absorption (max. 1%).
- Good resistance to settling.
- Soft and resilient.
- Resistant to ozone and UV light.
- Resistant to ageing.
- Manufactured from black EPDM cellular rubber.

Cellular rubber cord

A round EPDM cellular rubber strip with closed cells and skin.

Product no.	Dimensions Ø mm	Each length m	Pack. qty.	Remarks
484077200	3	100	1000	
484054500	4	100	1000

General - Joint strip

8:24

Made from black EPDM rubber, hardness 60±5° Shore. In addition to being used in joints between construction elements this joint strip can also be used as a scraper strip for garage doors and the like.

Product no.	Width x Height, mm	Bundle, m	Pack. qty. m
46054020	30 x 3	30	210
46054040	40 x 3	30	150
46054050	45 x 3	30	150
46054060	50 x 3	30	120
46054080	60 x 3	30	90
